

Protect your company's most critical asset: your data!

Are you ready for this?

Problem

Fire, building collapse, electro-magnetic radiation, flooding and vandalism are real threats to your data and your business survival:

"60% of companies that lose their data shut down within 6 months of the disaster".

"72% of businesses that suffer major data loss disappear within 24 months".

"One in five European businesses expect to have to cope with "major data loss" of some sort annually over the next five years".

And hardware failure is one of the most recurrent problems in any company:

"Your business might need over 4 days to recover 4 TB of data stored on tapes, PLUS 2-3 weeks to set up all network, firewall connections and operating systems!"

Solution

The **SmartDataSAFE** is the latest generation of compact, secure, plug&play Data Storage solution, **the most secure data container to date.**

Result

The **SmartDataSAFE** protects your company's most critical asset: your data, and it gives you **the fastest speed of data recovery and the highest storage capacity** to help guarantee your business continuity!

How

With similar technology to an airplane **black box**, the **SmartDataSAFE** protects your backup data against fire, water, theft, vandalism and building collapse.

Last generation up to 8 TB Network Attached Storage (NAS) provides the most reliable data backup up to RAID 5 (redundant copy).

Compatible with any backup software enables immediate access to the stored data in the event of any major disaster or

Advantages

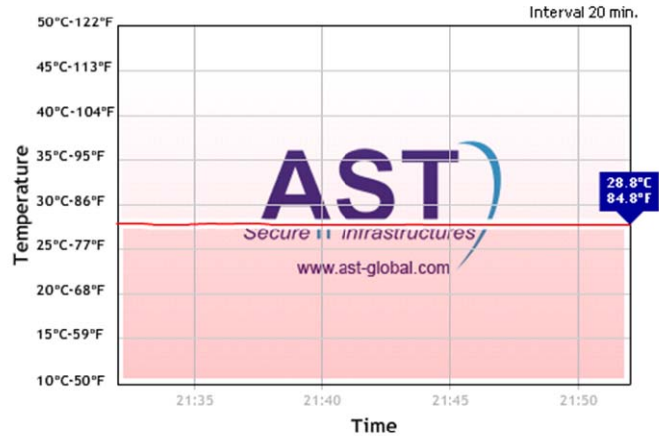

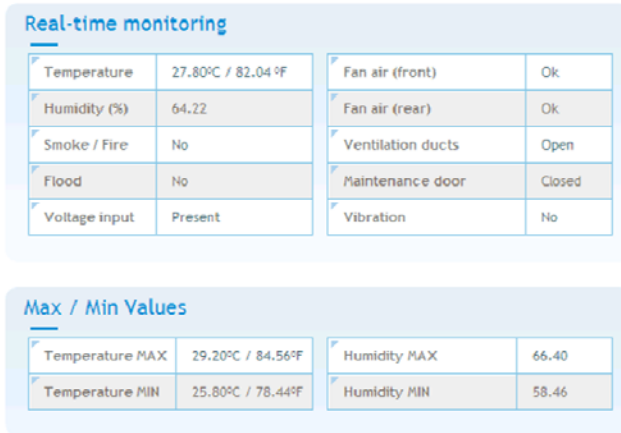

- Ideal for small & medium businesses, local authorities & professional organizations.
- 17" wide, rackable inside any 19" I.T. rack.
- The quickest way to recover your backup data, paramount for your business continuity.
- Modular & scalable to fit larger organizations.
- Easy to use & install.

- Massive Data Storage Capacity (up to 8TB). Std. version is 2.5 TB.
- Resistant to fire, water, theft, vandalism & building collapse.
- More reliable than backup tapes.
- Cost effective data backup solution for regulatory compliance.
- Online alarm monitoring, email & SMS alerts.

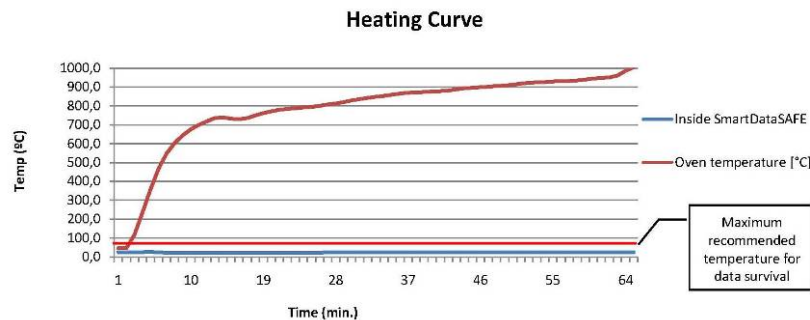

Online Monitoring

The **SmartDataSAFE** incorporates a monitoring software which allows to check online all the environmental parameters (temperature, relative humidity, etc) as well as receive alerts by email or SMS.

Tested

Tested in accordance to heating curve of EN1047-1 and UL72 standards. The internal temperature remained below 25°C (77°F), ensuring the survival of all backup data.

Technical Sheet

- Resistant to fire in accordance to the heating curve of EN 1047-1 standard.
- Ensures thermal stability and relative humidity performance.
- Fully modular and scalable. Fits hard drives from 100GB up to 1.5TB*.
- USB/Firewire Ethernet connection-ready.
- Front LEDs show disk status.
- Fully compatible with Windows, Linux, other OS and any other backup programs.
- Integrated with PROWARE continuous data backup software.
- Can be customised to meet the customers requirements.
- The **SmartDataSAFE** closes itself down when sensors detect abnormal parameters(temperature, movement, door opening, relative humidity, etc).

* Market availability may change to higher capacities
